Princeton Theological Seminary.

INAUGURATION

OF THE

REV. BENJAMIN B. WARFIELD, D.D.,

AS

PROFESSOR

OF

DIDACTIC AND POLEMIC THEOLOGY.

NEW YORK:

ANSON D. F. RANDOLPH & COMPANY.

1883.

PREFATORY NOTE.

The Rev. BENJAMIN B. WARFIELD, D.D., was elected Professor of Didactic and Polemic Theology in Princeton Seminary, at a special meeting of the Board of Directors, held in February, 1887. His formal inauguration was postponed at his own request, and took place by appointment, on Tuesday, May 8, 1888, at 11.30 o'clock, in the First Presbyterian Church of Princeton. The order of exercises on this occasion was as follows :

HYMN.

PRAYER, by the Rev. Dr. PHILIP SCHAFF, Professor in Union Theological Seminary, New York.

ADMINISTRATION OF THE PLEDGE TO THE NEW PROFESSOR, by the Rev. Dr. GOSMAN, President of the Board of Directors.

THE CHARGE, by the Rev. Dr. JAMES T. LEFTWICH, Pastor of the First Presbyterian Church, Baltimore.

THE INAUGURAL ADDRESS, by Professor WARFIELD.

BENEDICTION.

The Charge and Inaugural Address are here published by order of the Board of Directors.

THE CHARGE.

BY

THE REV. JAMES T. LEFTWICH, D.D

CHARGE.

MY DEAR BROTHER :

It gives me great pleasure to welcome you to the Professorship in this Seminary to which you have been called. In doing so, by a very natural train of associations I am reminded of the illustrious men who have preceded you here in the chair of Theology, who, having finished their labors, have entered into rest. First, in the order of time, was Dr. Archibald Alexander, in the highest sense of the term, not involving inspiration, a Seer, whose swift intuitions so often anticipated the conclusions, which, by rigorous processes of Logic, he subsequently reached only to verify and confirm them. Then came Dr. Charles Hodge, the great scholar as well as thinker, whose vast erudition was digested into stately volumes, which stand on the shelves of our libraries side by side with the ponderous works of Augustine, Calvin, Turretin, and Edwards; of them all, perhaps, the most widely read in our day, at least among English-speaking peoples. It was every way fitting that such a father as he should be succeeded, in his labors and in his honors, by such a son as the late lamented Dr. Archibald Alexander Hodge; a man of brilliant genius, in spirit simple as that little child whom, to illustrate the nature of true greatness, Jesus once set in the midst of His wondering disciples; while in intellect he was a giant in the power with which he grasped and wielded the sword of the Spirit which is the Word of God. In the power to formulate truth, to draw with unerring accuracy the fine line that at once includes all that belongs to its integrity, and excludes all that is foreign and extraneous, he had no superior, I had almost

said he had no peer in the Church in his day. In his "Outlines of Theology" may be found definitions, of which it is no extravagance to affirm that they have never been surpassed, if, indeed, they have ever been equalled, since the Westminster Divines closed their sessions in Jerusalem Chamber. It is said that as a young rustic, who himself afterwards became a celebrated painter, stood gazing with rapt admiration at one of the splendid creations of Correggio, the artistic spirit which, till then, had slumbered in his nature, suddenly awoke; when, in the joyous consciousness of his new-born powers, he exclaimed: "I, too, shall be Correggio." And I can desire no better fortune for this Seminary, at least in the department of Theology, than that, while preserving entire your personal gifts, you should at the same time so contemplate the examples of the eminent teachers who have preceded you, as to imbibe all that was loftiest in their spirit, and reproduce all that was best in their methods. You will permit me to remind you that the Board of Directors conferred on you no ordinary distinction when, looking abroad over our great Church, they fixed their eyes on you, as of all her sons the fittest, perhaps, to inherit the mantle of these ascended Prophets. I desire to congratulate you; and I desire to congratulate the Directors that, in the very free expression of opinion which your election has elicited, there has been heard, as yet, not so much as a whisper of dissent in any quarter; the entire Church affixing to the wisdom of your appointment the seal of its unqualified sanction. The high scholarship which marked throughout your career as a student in the Seminary, the special studies in which your faculties were disciplined during the entire term of your residence at Allegheny, together with the valuable contributions already made by your pen to our current Theological literature, are construed as so many pledges that, by the blessing of God on your efforts, you will not disappoint the very high expectations which your preferment has excited. And yet so responsible is the office of Professor of Theology in such a

Seminary as Princeton, and so tremendous are the interests which swing pivoted on your faithful discharge of its functions, that the Directors are not at liberty to omit from the ceremony of your induction the Charge that is customary on such occasions.

While it will be your office to teach truth,—and truth, too, of infinite importance,—it will not be your duty to teach all truth. For truth is coextensive with reality itself, of which it is always the faithful exponent. God has not called you, nor indeed has He called any man, to be an expositor of all truth. Even in the domain of Theology, the division of labor which obtains here as it does elsewhere, and which grows more and more minute as the world advances in knowledge, will confine your efforts to a single department,—“The Science of Didactic and Polemic Theology.” I say Science; for if facts, and inferences from facts logically drawn and systematically arranged, constitute Science: and if Science rises in dignity with the value and importance of its object-matter, then indeed must Theology, treating as it does of God, of man, and of their involved relations, be not only a Science, but of all Sciences the Queen.

The source from which you are to draw the materials of your Theology is the Scriptures; constituting, as they do, the only infallible and all-sufficient Rule of faith and practice. While it is true that it has pleased God to make a natural revelation of Himself; partly in the external world around us, partly in the course of history behind us, and partly in these living spirits within us, the Scriptures gather up into themselves all these scattered disclosures and utter them afresh to mankind; completing all and crowning all with a glory that is all their own,—The revelation of saving grace.

While you are to teach the truths of the Bible, you are to teach these truths as they are construed and reduced to system in the Confession and Catechisms of the Westminster Assembly. The outcry against Creeds and Systems of

Theology was never louder, perhaps, than at this very hour. The old indictment still bristles all over with the old counts. It is urged that they impugn the sufficiency of Scripture as the Rule of faith and practice, stifle the spirit of honest inquiry, fetter faculties that should be left free in the pursuit of truth, and impede, if they do not arrest progress in the noblest study on which the mind of man can be exercised. Without stopping to consider these specifications in detail, it is a sufficient reply to the general charge that system in Theology, as in every branch of inquiry, is absolutely necessary to appease one of the profoundest, one of the most importunate cravings of the human soul. Man is never at ease until he has found the one in the many, until he has reduced the multiform in fact to the uniform in idea. His ear, if finely strung, suffers torture until the various sounds, proceeding from the different instruments in a great orchestra, blend in a stream of perfect harmony. As he walks abroad among the scenes of nature, the emotion of beauty refuses to rise to its full height, until he has gathered up into the unity of his complex view the objects dispersed in the landscape before him. The scientific mind of the great Newton could not rest until, rising from the ordinary phenomena transpiring in the world around him, he reached at length on the heights of speculation the sublime generalization which holds in its grasp the material universe. And so, as he goes forth into the field of Revelation, the Theologian cannot be satisfied until he has gathered up the *disjecta membra* of truth that lie strewn around him, and has articulated them into a body of Divinity that, to his eye at least, is harmonious, symmetrical, complete.

It is only through system in Theology that we rise to knowledge in its highest form. A doctrine must be complemented, must be qualified, must be balanced by its correlates, if truth is to appear in its integrity. How beautifully was this illustrated in our Lord's temptation in the wilderness. It is written, as Satan urged, "He shall give his angels charge over thee, to keep thee in all thy ways; they

shall bear thee up in their hands lest at any time thou dash thy foot against a stone." But it is also written, as our Lord replied, "Thou shalt not tempt the Lord thy God." It is in the complex produced by combining the two half truths that the truth emerges as a whole.

It is easy to show that Confessions of faith condition the progress in Theology, which it is complained that they impede. The contents of the Bible have been distributed into Theology, Anthropology, Soteriology, Ecclesiology, and Eschatology; and Klieforth calls attention to the fact that it has pleased God to assign each of these branches to the Church in that land and in that age, in which it will be best qualified to develop it. Accordingly, Theology fell to the lot of the Greek Church, which embodied the results of its long and painful researches in the Nicene and Athanasian Symbols. After garnering the sheaves reaped from the field of Theology, the reapers were at liberty to enter in their order the fields that remained, as one after another they grew white unto the harvest. If they had failed to do this, it is easy to see that the fruits of the toils of centuries would have been lost to the Church and the world. On such a plan, progress in Theology would have been out of the question. What Macaulay says of the Ancient Philosophy would be equally true of Theology. The "Ancient Philosophy," says he, was a "tread-mill and not a path. It was made up of revolving questions, of controversies that were always returning again. There was no accumulation of truth, no heritage of truth acquired by the labor of one generation and bequeathed to another, to be transmitted again with large additions to a third. Where this Philosophy was in the days of Cicero, there it continued to be in the days of Seneca, and there it continued to be in the days of Faverinus. There was every trace of intellectual cultivation except a harvest. There was plenty of ploughing and harrowing and reaping, but the garner contained nothing but smut and stubble."

As to the sense in which our Articles of Faith are sub-

scribed there are three distinct views. The extreme positions never came into sharper conflict, perhaps, than during the great controversy which, in the year 1741, rent in twain the original Synod of Philadelphia. The Old Side, with extreme strictness, insisted on an *ipsissima verba* subscription; a yoke which neither they nor their fathers before them had been able to bear. The New Side, with extreme laxity, were no less strenuous in maintaining that the Subscription extends only to substance of Doctrine; a phrase, which, like the tent which the fairy presented in a nut-shell to Prince Ahmed, may be easily expanded until it shall include all shades of Theological opinion, from the straitest Augustinianism on the one hand to the baldest Pelagianism on the other. The true view lies at the middle point between these extremes, and requires subscription to our Symbols as containing the System of Doctrine taught in the Scriptures. Subscription in the *ipsissima verba* sense is bondage. Subscription in the "for substance of doctrine" sense is license. Subscription in the Systematic sense is freedom regulated by law, which is the only liberty worthy of the name.

Many present can easily recall the period in our National history when grave Senators attempted to vindicate their conduct in retaining their seats in Congress; and, at the same time, violating their oath to support the Constitution of the United States on the ground that it contained provisions which they could not in conscience observe. And this ethical heresy has crept into the bosom of the Church; where, Ministers of Religion, on precisely the same plea, would fain justify themselves in assailing the very Doctrines they are under vows to defend. Let the supremacy of conscience be acknowledged at all times and in all things. At the same time, no man is at liberty to accept, or accepting, to retain an office, knowing that it will precipitate a conflict between the mandate of his conscience and the fulfillment of his oath. Let the Senator be loyal to his conscience, never faltering for a moment or swerving by a hair, in his allegiance. But let him at the same time resign his seat in

Congress, and so absolve himself from the obligation of his oath. And if in the Providence of God it should ever fall out that you can no longer subscribe, and subscribe *ex animo*, the Doctrinal standards of the Presbyterian Church; then, at once and on the spot, restore inviolate to the Board of Directors, the trust they have confided to your honor.

In requiring you to subscribe our Confession, I am persuaded that we impose on you no hardship. St. Simon tells us that, like a pendulum in its arc, the world in its progress is ever swinging between periods that are organic and periods that are critical. It is in one of the critical ages that God has cast our lot. It is an age when, in every department of speculation and of action, the New is struggling to supplant the Old. It is an age when the eye is armed with the microscope and the hand with the scalpel. It is an age when multitudes are refusing to listen to the message which the Angel brings to us from the skies, because of their disgust at a few particles of dust which, contracted in his flight, are detected on his wings. It is an age when hand in hand with the Schoolmaster, the Reviser is abroad in the land.

And yet, in this the most critical of the critical ages, the instrument in which the Presbyterian Church confesses her Faith has stood more than a hundred years as unmoved, as unchanged as the rock Gibraltar. Aye, so serenely has the faith of the Church reposed on the bosom of her noble Confession that only recently has been started the question as to the mode in which it may be constitutionally amended. Indeed, in such perplexity is this whole subject involved, that two of our most gifted Divines have entered the arena as the respective champions of the two opposite views between which the Church is divided. And now that, like an indulgent mother, the Church has had compassion on her disconsolate sons; and, Princeton to the contrary notwithstanding, has licensed them to correct the error of their earlier years by marrying the sisters of their deceased wives, is there not good ground for the hope that in the Articles that are left to us, still like the rock Gibraltar,

our venerable Confession will survive unchanged the shocks of at least another century.

Passing to the manner of your teaching, I can touch only a few points which my time will not suffer me to expand.

Let your teaching be pronounced in its Calvinism. The common character of the Reformed Theology in its more than thirty formularies is the Calvinism with which it is pervaded. And the specific difference of Calvinism is the emphasis with which it signalizes grace in all the parts and at all the stages of a sinner's salvation. Am I mistaken when I affirm that the doctrines of grace no longer ring from our pulpits as they once did in the days of our fathers? Am I mistaken when I affirm that, in its reaction from the sharpness with which the Five Points were formerly pressed, the Church has swung to an extreme that is no less hurtful? If it is true that "One swallow does not make a Spring," it is also true that "Straws show how the wind blows." And is there not some significance in the fact that the committee charged with the duty of erecting in our national Capital a suitable memorial to the father of Republicanism, whether in the sphere of the Church or in the sphere of the State, after exercising due diligence, and that too for a considerable period, was compelled to return and report to the Assembly that the temper of the Church would not warrant a further prosecution of its task. It would be invidious to attempt, on an occasion like this, to fix the responsibility for such a state of things. But this I may say, and this, I will say, that the needed reform must begin in our Seminaries. For the voices of the people are only the multitudinous reverberations of the voice that issues from the Pulpit: and this, in turn, is only the echo of the voice that issues from the Chair.

Let your teaching be popular in its form. It is hardly necessary to remind you that your pupils will reproduce, and that too in exaggerated forms, all that may be vicious in your methods. If the bones that you serve out to your classes are dry bones, rest assured that the bones which they

in their turn will serve out to the people will be not dry only, but very dry. I do not forget the distinction drawn by Dr. Chalmers between the mode in which Theology should be taught in the Hall, and the mode in which it should be preached in the Pulpit; at the same time I remember that those lectures delivered to his pupils in the Hall were so profusely and brilliantly illustrated that close thinking was made not possible only, but easy and delightful even to the ordinary hearer. In the power to render popular the abstruse truths of Theology, your late predecessor was without a rival. It was never my fortune to hear him lecture from his Chair; but the man who could hold, as with a spell, the large and promiscuous audiences that assembled in Philadelphia to hear his discussion of such themes as "Predestination" and "God's Relation to the World," must have been the very Prince of teachers before his classes in the Seminary.

Let your teaching be evangelical in its spirit. As I utter these words, there rises before me the venerable form of the sainted Dr. Skinner. A close student to the last, the atmosphere which he always brought to his classes was more that of the closet than of the study. In those wonderful prayers, in which, lifting us in the arms of his faith, he bore us to the very foot of the throne, how often have I seen him, as in an ecstasy of devotion, his face shone like that of an Angel. When the Scriptures would represent in a single sentence the character of God, they tell us that God is love. Let love for Christ and for souls so burn in your heart, and beam from your features, and speak in your words, and breathe in your spirit, that, as you go in and out before your classes, you shall be, like the Master before you, yourself the incarnation of love.

INAUGURAL ADDRESS.

FATHERS AND BRETHREN OF THE BOARD OF DIRECTORS.

The signature which I have just affixed to the pledge which with great propriety, as I believe, you require of those whom you call to the responsible position of teachers in this Seminary, will have assured you already of the matter of the doctrinal teaching which is still to be expected in this institution. Mourning as you do here to-day, with the renewed grief which is brought back upon us all by the business of the hour, with its teeming memories of those great men of the past who have shed lustre on the whole church from the chair into which you are now inducting a new incumbent, may you not take some comfort in being assured that, with however diminished power, the same theology is still to be taught here that for three-quarters of a century gave to Princeton Seminary a noble name in the world? It was not my lot to know him who was called of God to plant the first seeds in this garden of the Lord. But it was my inestimable privilege to sit at the feet of him who tended it and watered it until its fragrance went out over the whole earth. And I rejoice to testify to you to-day that though the power of Charles Hodge may not be upon me, the theology of Charles Hodge is within me, and that this is the theology which, according to my ability, I have it in my heart to teach to the students of the coming

years. Oh, that the mantle of my Elijah might fall upon my shoulders; at least the message that was given to him is set within my lips.

In casting about for a subject germane to the occasion on which I might address you, I have lighted upon a line of thought which leads me to cast what I have to say into the form of some somewhat desultory remarks directed toward outlining the implications that arise from our regarding systematic theology as a science. I venture to state my subject, then, as

THE IDEA OF SYSTEMATIC THEOLOGY CONSIDERED AS
A SCIENCE.

I am not sure that we always realize how much we have already determined about theology, when we have made the simple assertion concerning it, that it is a science. In this single predicate is implicitly included a whole series of affirmations which, taken together, will give us a rather clear conception not only of what theology is, but also of what it deals with, whence it obtains its material, and for what purpose it exists. It will be my object in this address to make this plain to you.

I. First of all, then, let us observe that to say that theology is a science is to deny that it is a historical discipline, and to affirm that it seeks to discover not what has been or is held to be true, but what is ideally true; in other words, it is to declare that it deals with absolute truth and aims at organizing into a concatenated system all the truth in its sphere. Geology is a science, and on that very account there cannot be two geologies; its matter is all the well-

authenticated facts in its sphere, and its aim is to digest all these facts into one all-comprehending system. There may be rival psychologies, which fill the world with vain jangling; but they do not strive together in order that they may obtain the right to exist side by side in equal validity, but in strenuous effort to supplant and supersede one another: there can be but one true science of mind. In like manner, just because theology is a science there can be but one theology. This all-embracing system will brook no rival in its sphere, and there can be two theologies only at the cost of one or both of them being imperfect, incomplete, false. It is because theology is often looked upon, in accordance with a somewhat prevalent point of view, as a historical rather than a scientific discipline, that it is so frequently spoken of and defined as if it were but one of many similar schemes of thought. There is no doubt such a thing as Christian theology, as distinguished from Buddhist theology or Mohammedan theology; and men may study it as the theological implication of Christianity considered as one of the world's religions. But when studied from this point of view, it forms a section of a historical discipline and furnishes its share of facts for a history of religions; on the data supplied by which a science or philosophy of religion may in turn be based. We may also, no doubt, speak of the Pelagian and Augustinian theologies, or of the Calvinistic and Arminian theologies; but, again, we are speaking as historians and from a historical point of view. The Pelagian and Augustinian theologies are not two co-ordinate sciences of theology; they are rival theologies. If one is

true, just so far the other is false, and there is but one theology. This we may identify, as an empirical fact, with either or neither; but it is at all events one, inclusive of all theological truth and exclusive of all else as false or not germane to the subject.

In asserting that theology is a science, then, we assert that in its subject-matter, it includes all the facts belonging to that sphere of truth that we call theological; and we deny that it needs or will admit of limitation by a discriminating adjectival definition. We may speak of it as Christian theology just as we may speak of it as true theology, if we mean thereby more fully to describe what, as a matter of fact, theology is found to be; but not, if we mean thereby to discriminate it from some other assumed theology thus erected to a co-ordinate position with it. We may describe our method of procedure in attempting to ascertain and organize the truths that come before us for building into the system, and so speak of logical or inductive, of speculative or organic theology; or we may separate the one body of theology into its members, and, just as we speak of surface and organic geology or of physiological and direct psychology, so speak of the theology of grace and of sin, or of natural and revealed theology. But all these are but designations of methods of procedure in dealing with the one whole, or of the various sections that together constitute the one whole, which in its completeness is the science of theology, and which, as a science, is inclusive of all the truth in its sphere, however ascertained, however presented, however defended.

II. There is much more than this included, how-

ever, in calling theology a science. For the very existence of any science, three things are presupposed: (1) the reality of its subject-matter; (2) the capacity of the human mind to apprehend, receive into itself, and rationalize this subject-matter; and (3) some medium of communication by which the subject-matter is brought before the mind and presented to it for apprehension. There could be no astronomy, for example, if there were no heavenly bodies. And though the heavenly bodies existed, there could still be no science of them were there no mind to apprehend them. Facts do not make a science; even facts as apprehended do not make a science; they must be not only apprehended, but also so far comprehended as to be rationalized and thus combined into a correlated system. The mind brings somewhat to every science which is not included in the facts considered in themselves alone, as isolated data, or even as data perceived in relation to one another. Though they be thus known, science is not yet; and is not born save through the efforts of the mind in subsuming the facts under its own intuitions and forms of thought. No mind is satisfied with a bare cognition of facts: its very constitution forces it on to a restless energy until it succeeds in working these facts not only into a network of correlated relations among themselves, but also into a rational body of thought correlated to itself and its modes of thinking. The condition of science, then, is that the facts which fall within its scope shall be such as stand in relation not only to our faculties, so that they may be apprehended; but also to our mental constitution so that they may be so far understood as to be rationalized and wrought into

a system relative to our thinking. Thus a science of æsthetics presupposes an æsthetic faculty, and a science of morals a moral nature, as truly as a science of logic presupposes a logical apprehension, and a science of mathematics a capacity to comprehend the relations of numbers. But still again, though the facts had real existence, and the mind were furnished with a capacity for their reception and for a sympathetic estimate and embracing of them in their relations, no science could exist were there no media by which the facts should be brought before and communicated to the mind. The transmitter and intermediating wire are as essential for telegraphing as the message and the receiving instrument. Subjectively speaking, sense perception is the essential basis of all science of external things; self-consciousness, of internal things. But objective media are also necessary. For example, there could be no astronomy, were there no trembling ether through whose delicate telegraphy the facts of light and heat are transmitted to us from the suns and systems of the heavens. Subjective and objective conditions of communication must unite, before the facts that constitute the material of a science can be placed before the mind that gives it its form. The sense of sight is essential to astronomy: yet the sense of sight would be useless for forming an astronomy were there no objective ethereal messengers to bring us news from the stars. With these an astronomy becomes possible; but how meagre an astronomy compared with the new possibilities which have opened out with the discovery of a new medium of communication in the telescope, followed by still newer media in the subtile instruments by which our

modern investigators not only weigh the spheres in their courses, but analyze them into their chemical elements, map out the heavens in a chart, and separate the suns into their primary constituents.

Like all other sciences, therefore, theology, for its very existence as a science, presupposes the objective reality of the subject-matter with which it deals; the subjective capacity of the human mind so far to understand this subject-matter as to be able to subsume it under the forms of its thinking and to rationalize it into not only a comprehensive but also a comprehensible whole; and the existence of trustworthy media of communication by which the subject-matter is brought to the mind and presented before it for perception and understanding. That is to say: (1). The affirmation that theology is a science presupposes the affirmation that God is, and that He has relation to His creatures. Were there no God, there could be no theology; nor could there be a theology if, though He existed, He existed out of relation with His creatures. The whole body of philosophical apologetics is, therefore, presupposed in and underlies the structure of scientific theology. (2). The affirmation that theology is a science presupposes the affirmation that man has a religious nature, *i. e.*, a nature capable of understanding not only that God is, but also, to some extent, what He is; not only that He stands in relation with His creatures, but also what those relations are. Had man no religious nature he might, indeed, apprehend certain facts concerning God, but he could not so understand Him in His relations to man as to be able to respond to those facts in a true and sympathetic embrace. The total product of the

great science of religion, which investigates the nature and workings of this element in man's mental constitution, is therefore presupposed in and underlies the structure of scientific theology. (3). The affirmation that theology is a science presupposes the affirmation that there are media of communication by which God and Divine things are brought before the minds of men, that they may perceive them, and in perceiving, understand them. In other words, when we affirm that theology is a science, we affirm not only the reality of God's existence and our capacity so far to understand Him, but we affirm that He has made Himself known to us,—we affirm the objective reality of a revelation. Were there no revelation of God to men, our capacity to understand Him would lie dormant and unawakened; and though He really existed it would be to us as if He were not. There would be a God to be known and a mind to know Him; but theology would be as impossible as if there were neither the one nor the other. Not only, then, philosophical, but also, if there be a written revelation, the whole mass of historical apologetics by which the reality of a written revelation is vindicated, is presupposed in and underlies the structure of scientific theology.

III. In thus developing the implications of calling theology a science, we have already gone far toward determining our exact conception of what theology is. We have in effect, for example, settled our definition of theology. A science is defined from its subject-matter; and the subject-matter of theology is God in His nature and in His relations with His creatures. Theology is therefore that science which treats of

God and of the relations between God and the universe. To this definition most theologians have actually come. And those who define theology as "the science of God," mean the term God in a broad sense as inclusive also of His relations; while others exhibit their sense of the need of this inclusiveness by calling it "the science of God and of Divine things"; while still others speak of it more loosely, as "the science of the supernatural." These definitions fail rather in precision of language than in correctness of conception. Others, however, go astray in the conception itself. Thus theologians of the school of Schleiermacher usually derive their definition from the sources rather than the subject-matter of the science,—and so speak of theology as "the science of faith" or the like; a thoroughly unscientific procedure, even though our view of the sources be complete and unexceptionable, which is certainly not the case with this school. Quite as confusing is it to define theology, as is very currently done and often as an outgrowth of this same subjective tendency, as "the science of religion," or even—pressing the historical conception which as often underlies this type of definition, to its greatest extreme,—as "the science of the Christian religion." Theology and religion are parallel products of the same body of facts in diverse spheres; the one in the sphere of thought and the other in the sphere of life. And the definition of theology as "the science of religion" thus confounds the product of the facts concerning God and His relations with His creatures working through the hearts and lives of men, with those facts themselves; and consequently, whenever strictly understood, bases

theology not on the facts of the divine revelation, but on the facts of the religious life. This leads ultimately to a confusion of the two distinct disciplines of theology, the subject-matter of which is objective, and the science of religion, the subject-matter of which is subjective; with the effect of lowering the data of theology to the level of the aspirations and imaginings of man's own heart. Wherever this definition is found, either a subjective conception of theology which reduces it to a branch of psychology, may be suspected, or else a historical conception of it, a conception of "Christian theology" as one of the many theologies of the world parallel with, even if unspeakably truer than, the others with which it is classed and in conjunction with which it furnishes us with a full account of religion. When so conceived, it is natural to take a step further and permit the methodology of the science, as well as its idea, to be determined by its distinguishing element: thus theology, in contradiction to its very name, becomes Christo-centric. No doubt, "Christian theology," as a historical discipline, is Christo-centric; it is by its doctrine of redemption that it is differentiated from all the other theologies that the world has known. But theology as a science is and must be Theo-centric. So soon as we firmly grasp it from the scientific point of view, we see that there can be but one science of God and of His relations to His universe, and we no longer seek a point of discrimination, but rather a centre of development; and we quickly see that there can be but one centre about which so comprehensive a subject-matter can be organized,—the conception of God. He that hath seen Christ, has beyond doubt

seen the Father; but it is one thing to make Him the centre of theology so far as He is one with God, and another thing to organize all theology around Him as the theanthropos and in His specifically theanthropic work.

IV. Not only, however, is our definition of theology thus set for us: we have also determined in advance our conception of its sources. We have already made use of the term "revelation," to designate the medium by which the facts concerning God and His relations to His creatures are brought before men's minds, and so made the subject-matter of a possible science. The word accurately describes the condition of all knowledge of God. If there be a God, it follows by stringent necessity, that He can be known only so far as He reveals Himself. And it is but the converse of this, that if there be no revelation, there can be no knowledge, and, of course, no systematized knowledge or science of God. Our reaching up to Him in thought and inference is possible only because He condescends to make Himself intelligible to us, to speak to us through word or work, to reveal Himself. We hazard nothing, therefore, in saying that, as the condition of all theology is a revealed God, so, without limitation, the sole source of theology is revelation.

In so speaking, however, we have no thought of doubting that God's revelation of Himself is "in divers manners." We have no desire to deny that He has never left man without witness of His eternal power and Godhead, or that He has multiplied the manifestations of Himself in nature and providence and grace, so that every generation has had abiding

and unmistakable evidence that He is, that He is the good God, and that He is a God who marketh iniquity. Under the broad skirts of the term "revelation," every method of manifesting Himself which God uses in communicating knowledge of His being and attributes, may find shelter for itself—whether it be through those visible things of nature whereby His invisible things are clearly seen, or through the constitution of the human mind with its causal judgment indelibly stamped upon it, or through that voice of God that we call conscience, which proclaims His moral law within us, or through His providence in which He makes bare His arm for the government of the nations, or through the exercises of His grace, our experience under the tutelage of the Holy Ghost—or whether it be through the open visions of His prophets, the divinely-breathed pages of His written Word, the divine life of the Word Himself. How God reveals Himself—in what divers manners He makes Himself known to His creatures, is thus the subsequent question by raising which we distribute the one source of theology, revelation, into the various methods of revelation, each of which brings us true knowledge of God, and all of which must be taken account of in building our knowledge into one all-comprehending system. It is the accepted method of theology to infer that the God that made the eye must Himself see; that the God who sovereignly distributes His favors in the secular world may be sovereign too in grace; that the heart that condemns itself but repeats the condemnation of the greater God; that the songs of joy in which the Christian's happy soul voices its sense of God's gratuitous mercy,

are valid evidence that God has really dealt graciously with it. It is with no reserve that we accept all these sources of knowledge of God—nature, providence, Christian experience—as true and valid sources, the well-authenticated data yielded by which are to be received by us as revelations of God, and as such to be placed alongside of the revelations in the written Word and wrought with them into one system. As a matter of fact, theologians have always so dealt with them; and doubtless they always will so deal with them.

But to perceive, as all must perceive, that every method by which God manifests Himself is, so far as this manifestation can be clearly interpreted, a source of knowledge of Him, and must, therefore, be taken account of in framing all our knowledge of Him into one organic whole, is far from allowing that there are no differences among these various manifestations, in the amount of revelation they give, the clearness of their message; the ease and certainty with which they may be interpreted, or the importance of the special truths which they are fitted to convey. Far rather is it *a priori* likely that if there are “divers manners” in which God has revealed Himself, He has not revealed precisely the same message through each; that these “divers manners” correspond also to divers messages of divers degrees of importance, delivered with divers degrees of clearness. And the mere fact that He has included in these “divers manners” a copious revelation in a written Word, delivered with an authenticating accompaniment of signs and miracles, proved by recorded prophecies with their recorded fulfilments, and pressed, with the greatest solemnity,

upon the attention and consciences of men as the very Word of the Living God, who has by it made foolishness all the wisdom of men; nay, proclaimed as containing within itself the formulation of His truth, the proclamation of His law, the discovery of His plan of salvation:—this mere fact, I say, would itself and prior to all comparison, raise an overwhelming presumption that all the others of “the divers manners” of God’s revelation were insufficient for the purposes for which revelation is given, whether on account of defect in the amount of their communication or insufficiency of attestation or uncertainty of interpretation or fatal onesidedness in the character of the revelation they are adapted to give. We need not be surprised, therefore, that on actual examination, all these imperfections are found undeniably to attach to all forms of what we may, for the sake of discrimination, speak of as mere manifestations of God; and that thus the revelation of God in His written Word—in which are included the only authentic records of the revelation of Him through the incarnate Word—is easily shown not only to be incomparably superior to all other manifestations of Him in the fulness, richness, and clearness of its communications, but also to contain the sole discovery of all that it is most important for the soul to know as to its state and destiny, and of all that is most precious in our whole body of theological knowledge. The superior lucidity of this revelation makes it the norm of interpretation for what is revealed so much more darkly through the other methods of manifestation. The glorious character of the discoveries made in it, drives all other manifestations back into comparative insignificance. The amaz-

ing fulness of its disclosures renders the little that they can tell us of small comparative value. And its absolute completeness for the needs of man, taking up and reiteratingly repeating in the clearest of language all that can be, only after much difficulty and with much uncertainty, wrung from their enigmatic indications, and then adding to this a vast body of still more important truth undiscoverable through them, all but supersedes their necessity. With the fullest recognition of the validity of all the knowledge of God and His ways with men, which can be obtained through the manifestations of His power and divinity in nature and history and grace; and the frankest allowance that the written Word is given, not to destroy the manifestations of God, but to fulfill them; the theologian must yet refuse to give these sources of knowledge a place alongside of the written Word, in any other sense than that he gladly admits that they, alike with it, but in unspeakably lower measure, do tell us somewhat of God. And nothing can be a clearer indication of a decadent theology or of a decaying faith, than a tendency to neglect the Word in favor of some one or of all of the lesser sources of theological truth, as fountains from which to draw our knowledge of divine things. This were to prefer the flickering rays of a taper to the blazing light of the sun; to elect to draw our water from a muddy run rather than to dip it from the broad bosom of the pure fountain itself.

Nevertheless, men have often sought to still the cravings of their souls with a purely natural theology; and there are men to-day who prefer to derive their knowledge of what God is and what He will do for man from an analysis of the implications of their own

religious feelings: not staying to consider that nature, "red in tooth and claw with ravin," can but direct our eyes to the God of law, whose deadly letter killeth; or that our feelings must needs point us to the God of our imperfect apprehensions or of our unsanctified desires,—not to the God that is, so much as to the God that we would fain should be. The natural result of resting on the revelations of nature is despair; while the inevitable end of making our appeal to even the Christian heart is to make for ourselves refuges of lies in which there is neither truth nor safety. We may, indeed, admit that it is valid reasoning to infer from the nature of the Christian life what are the modes of God's activities toward His children: to see, for instance, in conviction of sin and the sudden peace of the new-born soul, God's hand in slaying that He may make alive, His almighty power in raising the spiritually dead. But how easy to overstep the limits of valid inference; and, forgetting that it is the body of Christian truth known and consciously assimilated that determines the type of Christian experience, confuse in our inferences what is from man with what is from God, and condition and limit our theology by the undeveloped Christian thought of the man or his times. The interpretation of the data included in what we have learned to call "the Christian consciousness," whether of the individual or of the church at large, is a process so delicate, so liable to error, so inevitably swayed to this side or that by the currents that flow up and down in the soul, that probably few satisfactory inferences could be drawn from it, had we not the norm of Christian experience and its dogmatic impli-

cations recorded for us in the perspicuous pages of the written word. But even were we to suppose that the interpretation was easy and secure, and that we had before us in an infallible formulation, all the implications of the religious experience of all the men who have ever known Christ, we have no reason to believe that the whole body of facts thus obtained, would suffice to give us a complete theology. After all, we know in part and we feel in part; it is only when that which is perfect shall appear that we shall know or experience all that Christ has in store for us. With the fullest acceptance, therefore, of the data of the theology of the feelings, no less than of natural theology, when their results are validly obtained and sufficiently authenticated as trustworthy, as divinely revealed facts which must be wrought into our system, it remains nevertheless true that we should be confined to a meagre and doubtful theology were these data not confirmed, reinforced, and supplemented by the surer and fuller revelations of Scripture; and that the Holy Scriptures are the source of theology in not only a degree, but also a sense in which nothing else is.

There might be a theology without the Scriptures, — a theology of nature, gathered by painful, and slow, and doubtful processes from what man saw around him in external nature and the course of history, and what he saw within him of nature and of grace. In like manner there may be and has been an astronomy of nature, gathered by man in his natural state without help from aught but his naked eyes, as he watched in the fields by night. But what is this astronomy of nature to the astronomy that has become possible

through the wonderful appliances of our observatories? The Word of God is to theology as, but vastly more than, these instruments are to astronomy. It is the instrument which so far increases the possibilities of the science as to revolutionize it and to place it upon a height from which it can never more descend. What would be thought of the deluded man, who, discarding the new methods of research, should insist on acquiring all the astronomy which he would admit, from the unaided observation of his own myopic and astigmatic eyes? Much more deluded is he who, neglecting the instrument of God's word written, would confine his admissions of theological truth to what he could discover from the broken lights that play upon external nature, and the faint gleams of a dying or even a slowly reviving light, which arise in his own sinful soul. Ah, no! the telescope first made a real science of astronomy possible: and the Scriptures form the only sufficing and thoroughly infallible source of theology.

V. Under such a conception of its nature and sources, we are driven to consider the place of systematic theology among the other theological disciplines as well as among the other sciences in general. Without encroaching upon the details of *Theological Encyclopædia*, we may adopt here the usual fourfold distribution of the theological disciplines into the Exegetical, the Historical, the Systematic, and the Practical, with only the correction of prefixing to them a fifth department of Apologetical Theology. The place of Systematic Theology in this distribution is determined by its relation to the preceding disciplines, of which it is

the crown and head. Apologetical theology prepares the way for all theology by establishing its necessary presuppositions without which no theology is possible—the existence and essential nature of God, the religious nature of man which enables him to receive a revelation from God, the possibility of a revelation and its actual realization in the Scriptures. It thus places the Scriptures in our hands for investigation and study. Exegetical theology receives these inspired writings from the hands of apologetics, and investigates their meaning; presenting us with a body of detailed and substantiated results, culminating in a series of organized systems of biblical history, biblical ethics, biblical theology, and the like, which provide material for further use in the more advanced disciplines. Historical theology investigates the progressive realization of Christianity in the lives, hearts, worship, and thought of men, issuing not only in a full account of the history of Christianity, but also in a body of facts which come into use in the more advanced disciplines, especially in the way of the sifted results of the reasoned thinking and deep experience of Christian truth during the whole past, as well as of the manifold experiments that have been made during the ages in Christian organization, worship, living, and creed-building. Systematic theology does not fail to strike its roots deeply into this matter furnished by historical theology; it knows how to profit by the experience of all past generations in their efforts to understand and define, to systematize and defend revealed truth; and it thinks of nothing so little as lightly to discard the conquests of so many hard-fought fields. It therefore gladly utilizes all the ma-

terial that historical theology brings it, accounting it, indeed, the very precipitate of the Christian consciousness of the past; but it does not use it crudely, or at first hand for itself, but accepts it as investigated, explained, and made available by the sister discipline of historical theology which alone can understand it or draw from it its true lessons. It certainly does not find in it its chief or primary source, and its relation to historical theology is, in consequence, far less close than that in which it stands to exegetical theology which is its true and especial handmaid. The independence of exegetical theology is seen in the fact that it does its work wholly without thought or anxiety as to the use that is to be made of its results; and that it furnishes a vastly larger body of data than can be utilized by any one discipline. It provides a body of historical, ethical, liturgic, ecclesiastical facts, as well as a body of theological facts. But so far as its theological facts are concerned, it provides them chiefly that they may be used by systematic theology as material out of which to build its system. This is not to forget the claims of biblical theology. It is rather to emphasize its value, and to afford occasion for explaining its true place in the encyclopædia, and its true relations on the one side to exegetical theology, and on the other to systematics,—a matter which appears to be even yet imperfectly understood in some quarters. Biblical theology is not a section of historical theology, although it must be studied in a historical spirit, and has a historical face; it is rather the ripest fruit of exegetics, and exegetics has not performed its full task until its scattered results in the way of theological data are gathered up into a full and articulated

system of biblical theology. It is to be hoped that the time will come when no commentary will be considered complete until the capstone is placed upon its fabric by closing chapters gathering up into systematized exhibits, the unsystematized results of the continuous exegesis of the text, in the spheres of history, ethics, theology, and the like. The task of biblical theology, in a word, is the task of co-ordinating the scattered results of continuous exegesis into a concatenated whole, whether with reference to a single book of Scripture or to a body of related books or to the whole Scriptural fabric. Its chief object is not to find differences of conception between the various writers, though some recent students of the subject seem to think this is so much their duty, that when they cannot find differences, they make them. It is to reproduce the theological thought of each writer or group of writers in the form in which it lay in their own minds, so that we may be enabled to look at all their theological statements at their angle, and to understand all their deliverances as modified and conditioned by their own point of view. Its exegetical value lies just in this circumstance, that it is only when we have thus concatenated an author's theological statements into a whole, that we can be sure that we understand them as he understood them in detail. A light is inevitably thrown back from biblical theology upon the separate theological deliverances as they occur in the text, such as subtly colors them, and often, for the first time, gives them to us in their true setting, and thus enables us to guard against perverting them when we adapt them to our use. This is a noble function, and could students of biblical theology

only firmly grasp it, once for all, as their task, it would prevent the bringing this important science into contempt through a tendency to exaggerate differences in form of statement into divergences of view, and so to force the deliverances of each book into a strange and unnatural combination, in their effort to vindicate a function for their discipline.

The relation of biblical theology to systematic theology is based on a true view of its function. Systematic theology is not founded on the direct and primary results of the exegetical process; it is founded on the final and complete results of exegesis as exhibited in biblical theology. Not exegesis itself, then, but biblical theology, provides the material for systematics. It is not, then, a rival of systematics; it is not even a parallel product of the same body of facts, provided by exegesis; it is the basis and source of systematics. Systematic theology is not a concatenation of the scattered theological data furnished by the exegetic process; it is the combination of the already concatenated data given to it by biblical theology. It uses the individual data furnished by exegesis, in a word, not crudely, not independently for itself, but only after these data have been worked up into biblical theology and have received from it their final coloring and subtlest shades of meaning—in other words, only in their true sense, and only after exegetics has said its last word upon them. Just as we shall attain our finest and truest conception of the person and work of Christ, not by crudely trying to combine the scattered details of His life and teaching as given in our four gospels into one patchwork life and account of His teaching; but far more rationally

and far more successfully by first catching Matthew's full conception of Jesus, and then Mark's, and then Luke's, and then John's, and combining these four conceptions into one rounded whole :—so we gain our truest systematics not by at once working together the separate dogmatic statements in the Scriptures, but by combining them in their due order and proportion as they stand in the various theologies of the Scriptures. Thus we are enabled to view the future whole not only in its parts, but in the several combinations of the parts, and, looking at it from every side, to obtain a true conception of its solidity and strength, and to avoid all exaggeration or falsification of the details in giving them place in the completed structure. And thus we do not make our theology, according to our own pattern, as a mosaic, out of the fragments of the biblical teaching; but rather look out from ourselves upon it as a great prospect, framed out of the mountains and plains of the theologies of the Scriptures, and strive to attain a point of view from which we can bring the whole landscape into our field of sight. From this point of view, we find no difficulty in understanding the relation in which the several disciplines stand to one another, with respect to their contents. The material that systematics draws from other than biblical sources may be here left out of account, seeing that we are now investigating its relations, considered as a biblical discipline, to its fellow biblical departments. The actual contents of the theological results of the exegetic process, of biblical theology, and of systematics, with this limitation, may be said to be the same. The immediate work of exegesis may be compared to the work of a recruiting officer: it

draws out from the mass of mankind the men who are to constitute the army. Biblical theology organizes these men into companies and regiments and corps, arranged in marching order and accoutred for service. Systematic theology combines these companies and regiments and corps into an army drawn up in battle array against the enemy of the day. It, too, is composed of men—the same men which were recruited by exegetics; but it is composed of these men, not as individuals merely, but in their due relations to the other men of their companies and regiments and corps. The simile not only illustrates the mutual relations of the disciplines, but also suggests the historical element that attaches to biblical theology, and the polemic or practical element which is inseparable from systematic theology as distinguished from a merely biblical dogmatic. It is just this polemico-practical element, determining the spirit and therefore the methods of systematic theology, which, along with its greater inclusiveness, discriminates it from all forms of biblical theology the spirit of which is purely historical.

VI. The place that theology claims for itself, as the scientific presentation of all the facts that are known concerning God and His relations, within the circle of the sciences, is an equally high one. Whether we consider the topics which it treats, in their dignity, their excellence, their grandeur; or the certainty with which its data can be determined; or the completeness with which its principles have been ascertained and its details classified; or the usefulness and importance of its discoveries: it is as far out of all comparison above all other sciences as the eternal

health and destiny of the soul are of more value than this fleeting life in this world. It is not so above them, however, as not to be also within them. There is no one of them all which is not in some measure touched and affected by it, or, we may even say, which is not in some measure included in it. As all nature, whether mental or material, may be conceived of as only the mode in which God manifests Himself, every science which investigates nature and ascertains its laws, is occupied with the discovery of the modes of the Divine action, and as such might be considered a branch of theology. Its closest relations are, no doubt, with the highest of the other sciences, ethics. Any discussion of our duty to God must rest on a knowledge of our relation to Him; and much of our duty to man is undiscoverable, save through knowledge of our common relation to the one God and Father of all, and one Lord the Redeemer of all, and one Spirit the sanctifier of all,—all of which it is the function of theology to supply. This is not inconsistent with the existence of a natural ethics; but an ethics independent of theological conceptions would be a meagre thing indeed, while the theology of the Scriptural revelation for the first time affords a basis for ethical investigation at once broad enough and sure enough to raise that science to its true dignity. Neither must we on the ground of this intimacy of relation confound the two sciences of theology and ethics. Something like it in kind and approaching it in degree exists between theology and every other science, no one of which is so independent of it as not to touch and be touched by it. Much of theology is presupposed in all metaphysics and

physics alike. It alone can determine the origin of either matter or mind, or of the mystic powers that have been granted to them. It alone can explain the nature of second causes and set the boundaries to their efficiency. It alone is competent to declare the meaning of the ineradicable persuasion of the human mind that its reason is right reason, its processes trustworthy, its intuitions true. All science without God is mutilated science, and no account of a single branch of knowledge can ever be complete until it is pushed back to find its completion and ground in Him. It is as true of sciences as it is of creatures, that in Him they all live and move and have their being. The science of Him and His relations is thus the necessary ground of all science. All speculation takes us back to Him; all inquiry presupposes Him; and every phase of science consciously or unconsciously rests at every step on the science that makes Him known. Theology, thus, both lies at the root of all sciences, and brings to each its capstone and crown. Each could, indeed, exist without it, in a sense and in some degree; but through it alone can any one of them reach its true dignity. Herein we see not only the proof of its greatness, but also the assurance of its permanence. "What so permeates all sections and subjects of human thought, has a deep root in human nature and an immense hold on it. What so possesses man's mind that he cannot think at all without thinking of it, is so bound up with the very being of intelligence that ere it can perish, intellect must cease to be." *

* Principal Fairbairn.

VII. The interpretation of a written document, intended to convey a plain message, is infinitely easier than the interpretation of the teaching embodied in facts themselves. It is therefore that systematic treatises on the several sciences are written. Theology has, therefore, an immense advantage over all other sciences, inasmuch as it is more an inductive study of facts conveyed in a written revelation, than an inductive study of facts as conveyed in life. It was, consequently, the first-born of the sciences. It was the first to reach relative completeness. And it is today in a state far nearer perfection than any other science. This is not, however, to deny that it is a progressive science. In exactly the same sense (though not in equal degree) in which any other science is progressive, this is progressive. It is not meant that new revelations are to be expected, or new discoveries made, of truth which has not been before within the reach of man. There is a vast difference between the progress of a science and increase in its material. All the facts of psychology, for instance, have been in existence so long as mind itself has existed; and the progress of this science has been dependent on the progressive discovery, understanding, and systematization of these facts. All the facts of theology have, in like manner, been within the reach of man for nearly two millenniums; and the progress of theology is dependent on men's progress in gathering, defining, mentally assimilating, and organizing these facts into a correlated system. So long as revelation was not completed, the progressive character of theology was secured by the progress in revelation itself. And since the close of

•

the canon of Scripture, the intellectual realization and definition of the doctrines revealed in it, in relation to one another, have been, as a mere matter of fact, a slow but ever advancing process. The affirmation that theology has been a progressive science is no more, then, than to assert that it is a science that has had a history,—and a history which can be and should be genetically traced and presented. First, the objective side of Christian truth was developed: pressed on the one side by the crass monotheism of the Jews and on the other by the coarse polytheism of the heathen, and urged on by its own internal need of understanding the sources of its life, Christian theology first searched the Scriptures that it might understand the nature and modes of existence of its God and the person of its divine redeemer. Then, more and more conscious of itself, it more and more fully wrought out from those same Scriptures a guarded expression of the subjective side of its faith; until through throes and conflicts it has built up the system which we all inherit. Thus the body of Christian truth has come down to us in the form of an organic growth; and we can conceive of the completed structure as the ripened fruit of the ages, as truly as we can think of it as the perfected result of the exegetical discipline. As it has come into our possession by this historic process, there is no reason that we can assign why it should not continue to make for itself a history. We do not expect the history of theology to close in our own day. However nearly completed our realization of the body of truth may seem to us to be; however certain it is that the great outlines are already securely laid and most of the details soundly

•

discovered and arranged; no one will assert that every detail is as yet perfected, and we are all living in the confidence so admirably expressed by old John Robinson, "that God hath more truth yet to break forth from His holy word." Just because God gives us the truth in single threads which we must weave into the reticulated texture, all the threads are always within our reach, but the finished texture is ever and will ever continue to be before us until we dare affirm that there is no truth in the word which we have not perfectly apprehended, and no relation of these truths as revealed which we have not perfectly understood, and no possibility in clearness of presentation which we have not attained.

The conditions of progress in theology are clearly discernible from its nature as a science. The progressive men in any science are the men who stand firmly on the basis of the already ascertained truth. The condition of progress in building the structures of those great cathedrals whose splendid piles glorify the history of art in the middle ages, was that each succeeding generation should build upon the foundations laid by its predecessor. If each architect had begun by destroying what had been accomplished by his forerunners, no cathedral would ever have been raised. The railroad is pushed across the continent by the simple process of laying each rail at the end of the line already laid. The prerequisite of all progress is a clear discrimination which as frankly accepts the limitations set by the truth already discovered, as it rejects the false and bad. Construction is not destruction; neither is it the outcome of destruction. There are abuses no doubt to be re-

formed; errors to correct; falsehoods to cut away. But the history of progress in every science and no less in theology, is a story of impulses given, corrected and assimilated. And when they have been once corrected and assimilated, these truths are to remain accepted. It is then time for another impulse, and the condition of all further progress is to place ourselves in this well-marked line of growth. Astronomy, for example, has had such a history; and there are now some indisputable truths in astronomy, as, for instance, the rotundity of the earth and the central place of the sun in our system. I do not say that these truths are undisputed; probably nothing is any more undisputed in astronomy, or any other science, than in theology. At all events he who wishes, may read the elaborate arguments of the "Zetetic" philosophers, as they love to call themselves, who in this year of grace are striving to prove that the earth is flat and occupies the centre of our system. Quite in the same spirit, there are "Zetetic" theologians who strive with similar zeal and acuteness to overturn the established basal truths of theology,—which, however, can never more be shaken; and we should give about as much ear to them in the one science as in the other. It is utter folly to suppose that progress can be made otherwise than by placing ourselves in the line of progress; and if the temple of God's truth is ever to be completely built, we must not spend our efforts in digging at the foundations which have been securely laid in the distant past, but must rather give our best efforts to rounding the arches, carving the capitals, and fitting in the fretted roof. What if it is not ours to lay foundations? Let

us rejoice that that work has been done! Happy are we if our God will permit us to bring a single capstone into place. This fabric is not a house of cards to be built and blown down again an hundred times a day, as the amusement of our idle hours: it is a miracle of art to which all ages and lands bring their various tribute. The subtile Greek laid the foundations; the law-loving Roman raised high the walls; and all the perspicuity of France and ideality of Germany and systematization of Holland and deep sobriety of Britain have been expended in perfecting the structure; and so it grows. We have heard much in these last days of the phrase, "Progressive orthodoxy," and in somewhat strange connections. Nevertheless, the phrase itself is not an inapt description of the building of this theological house. Let us assert that the history of theology has been and ever must be a progressive orthodoxy. But let us equally loudly assert that progressive orthodoxy and retrogressive heterodoxy can scarcely be convertible terms. Progressive orthodoxy implies that first of all we are orthodox, and secondly that we are progressively orthodox, *i. e.*, that we are ever growing more and more orthodox as more and more truth is being established. This has been and must be the history of the advance of every science, and not less, among them, of the science of theology. Justin Martyr, champion of the orthodoxy of his day, held a theory of the intertrinitarian relationship which became heterodoxy after the Council of Nice; the ever-struggling Christologies of the earlier ages were forever set aside by the Chalcedon fathers; Augustine determined for all time the doctrine of

grace, Anselm the doctrine of the atonement, Luther the doctrine of forensic justification. In any progressive science, the amount of departure from accepted truth which is possible to the sound thinker becomes thus ever less and less, in proportion as investigation and study result in the progressive establishment of an ever increasing number of facts. The physician who would bring back to-day the medicine of Galen would be no more mad than the theologian who would revive the theology of Clement of Alexandria. Both were men of light and leading in their time ; but their time is past, and it is the privilege of the child of to-day to know a sounder physic and a sounder theology than the giants of that far past yesterday could attain. It is of the very essence of our position at the end of the ages that we are ever more and more hedged around with ascertained facts, the discovery and establishment of which constitute the very essence of progress. Progress brings progressive limitation, just because it brings progressive knowledge. And as the orthodox man is he that teaches no other doctrine than that which has been established as true ; the progressively orthodox man is he who is quick to perceive, admit, and condition all his reasoning by all the truth down to the latest, which has been established as true.

VIII. When we speak of progress our eyes are set upon a goal. And in calling theology a progressive science we unavoidably raise the inquiry, what the end and purpose is toward an ever-increasing fitness to secure which it is continually growing. When we consider the surpassing glory of the subject-matter

with which it deals, it would appear that if ever science existed for its own sake, this might surely be true of this science. The truths concerning God and His relations are, above all comparison, in themselves the most worthy of all truths of study and examination. Yet we must vindicate for theology rather that it is an eminently practical science. The contemplation and exhibition of Christianity as truth, is far from the end of the matter. This truth is specially communicated by God for a purpose, for which it is admirably adapted. That purpose is to save and sanctify the soul. And the discovery, study, and systematization of the truth is in order that, firmly grasping it and thoroughly comprehending it in all its reciprocal relations, we may be able to make the most efficient use of it for its holy purpose. Well worth our most laborious study, then, as it is, for its own sake as mere truth; it becomes not only absorbingly interesting, but inexpressibly precious to us when we bear in mind that the truth with which we thus deal constitutes, as a whole, the engrafted Word that is able to save our souls. The task of thoroughly exploring the pages of revelation, soundly gathering from them their treasures of theological teaching and carefully fitting these into their due places in a system whereby they may be preserved from misunderstanding, perversion, and misuse, and given a new power to convince the understanding, move the heart, and quicken the will, becomes thus a holy duty to our own and our brothers' souls as well as our eager pleasure of our intellectual nature. That the knowledge of the truth is an essential prerequisite to the production of those graces and the building up of those elements of a sanctified char-

acter for the production of which each truth is especially adapted, probably no one denies: but surely it is equally true that the clearer, fuller, and more discriminating this knowledge is, the more certainly and richly will it produce its appropriate effect; and in this is found a most complete vindication of the duty of systematizing the separate elements of truth into a single soundly concatenated whole, by which the essential nature of each is made as clear as it can be made to human apprehension. It is not a matter of indifference, then, how we apprehend and systematize this truth. On the contrary, if we misconceive it in its parts or in its relations, not only do our views of truth become confused and erroneous, but also our religious life becomes dwarfed or contorted. The character of our religion is, in a word, determined by the character of our theology: and thus the task of the systematic theologian is to see that the relations in which the separate truths actually stand are rightly conceived, in order that they may exert their rightful influence on the development of the religious life. As no truth is so insignificant as to have no place in the development of our religious life, so no truth is so unimportant that we dare neglect it or deal deceitfully with it in adjusting it into our system. We are smitten with a deadly fear on the one side, lest by fitting them into a system of our own devising, we cut from them just the angles by which they were intended to lay hold of the hearts of men: but on the other side, we are filled with a holy confidence that, by allowing them to frame themselves into their own system as indicated by their own natures,—as the stones in Solomon's temple were cut each for its place,—we shall make each

available for all men, for just the place in the saving process for which it was divinely framed and divinely given.

From this point of view the systematic theologian is pre-eminently a preacher of the Gospel; and the end of his work is not merely the logical arrangement of the truths which come under his hand, but the moving of men through their power to love God with all their hearts, and their neighbors as themselves; to choose their portion with the Saviour of their souls; to find and hold Him precious; and to recognize and yield to the sweet influences of the Holy Spirit whom He has sent. With such truth as this he will not dare to deal in a cold and merely scientific spirit, but will justly and necessarily permit its preciousness and its practical destination to determine the spirit in which he handles it, and to awaken the reverential love with which alone he should investigate its reciprocal relations. For this he needs to be suffused at all times with a sense of the unspeakable worth of the revelation which lies before him as the source of his material, and with the personal bearings of its separate truths on his own heart and life; he needs to have had and to be having a full, rich, and deep religious experience of the great doctrines with which he deals; he needs to be living close to his God, to be resting always on the bosom of his Redeemer, to be filled at all times with the manifest influences of the Holy Spirit. The teacher of systematic theology needs a very sensitive religious nature, a most thoroughly consecrated heart, and an outpouring of the Holy Ghost upon him, such as will fill him with that spiritual discernment, without which all native intellect is

in vain. He needs to be not merely a student, not merely a thinker, not merely a systematizer, not merely a teacher,—he needs to be like the beloved disciple himself in the highest, truest and holiest sense, a divine.

FATHERS AND BRETHREN, as I speak these words, my heart fails me in a deadly anxiety. “Who is sufficient for these things?” it cries to me in a true dismay. We all remember how but a short decade ago one stood in this place where I now stand, who, in the estimation of us all, was richly provided by nature and grace for the great task which now lies before me, but which then lay before him. “Alas! sirs,” said he, with a humility which was characteristic of his chastened and noble soul,—“Alas! sirs, when I think of myself, I often cry, ‘Woe is me, that such an one as I, should be called to inherit the responsibilities descending in such a line.’ And when I think of the Church, I cry with a far sorer wonder, ‘What times are these, when such a man as I should be made to stand in such a place?’” With far more reason may I be allowed to echo these words to-day. With far more need may I demand now, as he demanded then, your prayers for me, that in “the service to-day inaugurated, God’s strength may be made perfect in my weakness.”
